Power Trade & Energy Exchange Limited (PTEEL)

Creating Electricity Markets

POWER TRADE AND ENERGY EXCHANGE LTD.

Background

In recent years, Nepal is emerging as an energy surplus nation during certain periods of the year while being deficit at other times of the year, an ideal situation for setting up power trading regime for delivering quality and reliable power supply to the people of the country and to establish a profitable venture through power sales to the neighboring countries. The "Multiple seller and Multiple buyer" market model is set to become a reality, after the proposed power sector reforms.

The Power Trade and Energy Exchange Ltd. (hereinafter referred to as "PTEEL") was incorporated at the Office of Company Registrar of Government of Nepal in August 2020. The objectives of PTEEL include, but are not limited to, power trading within Nepal and across-borders in the South Asian Regional Electricity Market, electricity origination business, development of financial instruments for power trade, and ultimately, establishment of an electricity exchange in Nepal.

Vision

- To develop PTEEL as a leading vibrant agency for power trade and electricity exchange

Mission

- To establish power trade as a recognized business in Nepal along with establishment of electricity exchange in Nepal by facilitating power trade between sellers and buyers within Nepal and across borders.

Objectives

- To explore markets for power trade/exchange both within Nepal and across border in the South Asian Regional Electricity Market,
- To develop Origination Business
- To develop Financial Instruments for Power Trade, and
- To establish Electricity Exchange in Nepal.

Strategy

- To secure Approval/Trading License from Nepal Government for power trading inside Nepal and across the borders,
- To advocate for adequate transmission network inside Nepal for cross border transmission line,
- To lobby for private sector supportive Laws and Regulations for hassle-free power trade/exchange
- To ensure listing of PTEEL in Nepal's Share Market,

POWER TRADE AND ENERGY EXCHANGE LTD.

Plans and Programs:

1. Immediate Plans

- Follow-up to the Approval of the License for power trading from the Ministry of Energy, Water Resources & Irrigation.
- Explore potential power companies for power sales arrangement and equity investment
- Equity investment from financial institutions and insurance companies (on going)
- Secure Approval/License from Nepal Government for power trading and setting up of electricity exchange
- PTEEL's real operations to commence

2. Long Term Plans

- Develop PTEEL into a vibrant Electricity Trading and Electricity Exchange Centre of Nepal, ensuring level playing for all participants, setting up efficient price and quantity clearance mechanisms, followed up by development of futures market in electricity.

Prospects for Power Trade:

The provision of the wheeling system (budget speech 2021/22) has paved way for power trade. Moreover, there is already a provision of power sales by private sector in the proposed Electricity Bill-2080, which is being discussed in the parliament. Furthermore, Cross Border Electricity Trading (CBET) procedures, released by Government of India has officially opened door for cross border power trade. Besides it, the SAARC, BIMSTEC, SASEC Agreements have provided a framework for regional co-operation in power connectivity, and both India and Bangladesh have expressed keen interest in importing power from Nepal.

PTEEL has already started discussions for partnership agreements with Indian companies involved in power trading. Responses from these Indian companies are very encouraging.

India's plan to buy 10,000 MW of electricity in the next 10 years from Nepal, India's decision to open up the Real-Time Market (RTM), along with the already in-use Day Ahead Market for Nepal, and the decision to upgrade the capacity of cross border Transmission Lines between

Nepal and India have set a perfect tone for the larger volume of power trade between Nepal and India.

The prospects for power trade by private sector, were, therefore, never brighter before in Nepal.

Benefits of Power Trade:

Private Power Plants will have access to competitive electricity market inside Nepal or cross border. IPPs can design plants, based on power market optimization and any available energy, on top of the committed energy to NEA, can be sold in domestic or cross border electricity market, fetching competitive price for the energy.

In the case of hydropower projects, there will be increasing tendency to switch-over to Peaking Run of River from the Run of River Projects, to sell energy during peak hours, when the tariff rate is the maximum. More projects will come up, due to improved financial viability of hydropower projects, especially peaking run of reservoir and reservoir projects.

The government will also benefit from increased revenue, which can be used in infrastructure and social sectors e.g. transmission lines, health, education, poverty alleviation etc.

Ongoing Activities:

Preparations for acquiring Approval / License for power trading and Electricity Exchange from Nepal Government.

Advocacy for power trade within Nepal and across borders in South Asian Region

Discussions with international partners and Development Agencies for strategic alliances.
